

# Team Server configuration options

The Team Server options are only available in the BiZZdesign [on-premise solution](#). Only license information is available in the cloud solution. If you are working with the cloud solution, you can [contact](#) BiZZdesign Support to submit a change request for some of the settings. It is indicated on the support page of the setting if this is possible.

All configuration options can be changed in the Team Server settings, except for the database configuration. This is directly done in the Team Server configuration file. Click a link for more information.

## Required roles

System Administrator

- [Identification details](#)
- [Invitation limitations](#)
- [User visibility in workflows for Contributors](#)
- [Password policy](#)
- [Cookies settings](#)
- [Lockout policy](#)
- [Client tokens](#)
- [E-mail configuration](#)
- [Database configuration](#)
- [User synchronization and authentication with an external identity provider](#)

Additionally, the following information can be viewed in the Team Server:

- [Team Server audit log](#)
- [License information in the Team Server](#)
