

Setting up 2-step verification for signing in to HoriZZon

When using a HoriZZon account for signing in to HoriZZon, it is possible to use 2-step verification for signing in. 2-Step verification is a method of authentication that requires the use of more than one verification method and provides extra security for signing in to HoriZZon. If you want to use 2-step verification, you need to set up your HoriZZon account for it.

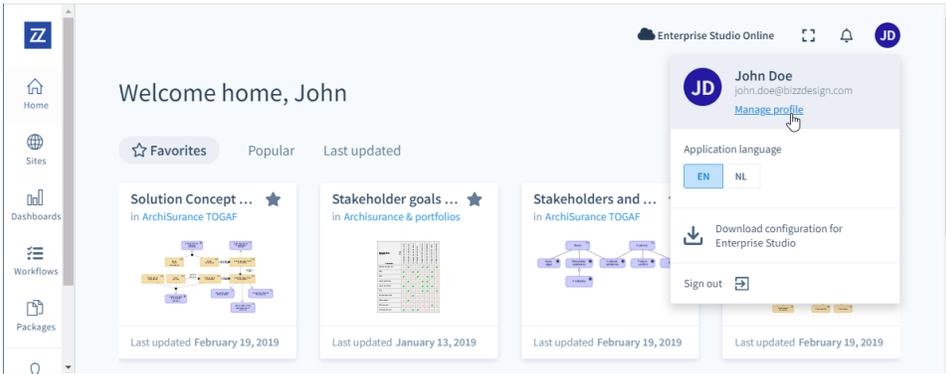

Setting up this 2-step verification is not possible if you use an organizational account to sign in to HoriZZon.

Setting up this 2-step verification cannot be forced. Users have to set it up themselves. If the use of a 2-step verification should be forced, users should use an organizational account from an external identity provider to sign in to HoriZZon, and the organizational security settings should be set accordingly.

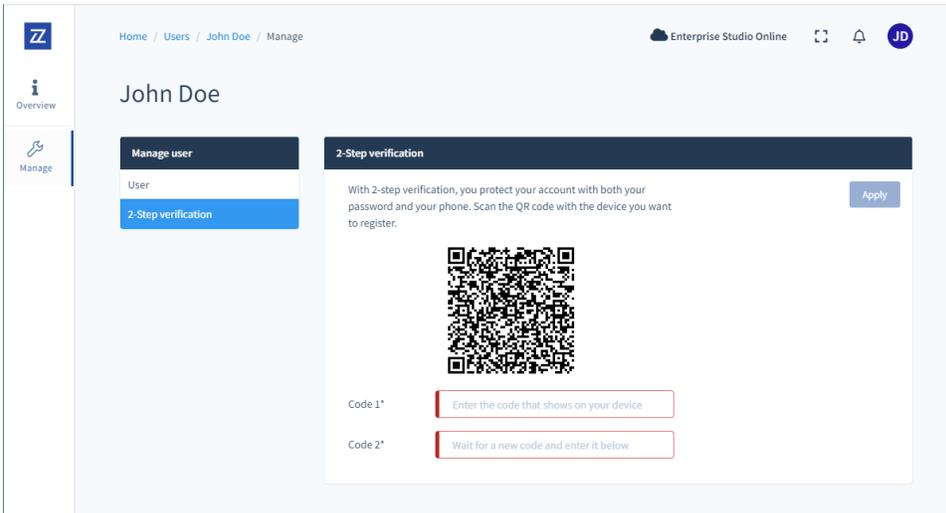

Steps:

1. Sign in to HoriZZon like you normally do.
2. In the toolbar, click your profile icon, and then click **Manage profile**.

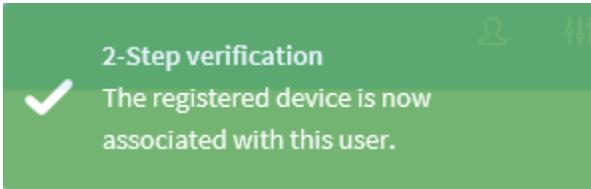

Alternatively, you can click **Users** in the sidebar menu, click your user, and in the sidebar menu click **Manage** to open your user manage page, or on the **Users** page, click  in your user to open it.

3. In the **Manage user** menu, select **2-Step verification**, and scan the QR code with your device running an authentication app. The app will provide a 6-digit code.

4. Type the code in **Code 1**. Wait up to 30 seconds for the authentication app to provide the next code.

5. Type the second code in **Code 2**, and click **Apply**. If the association has been successful, you should see the following message:

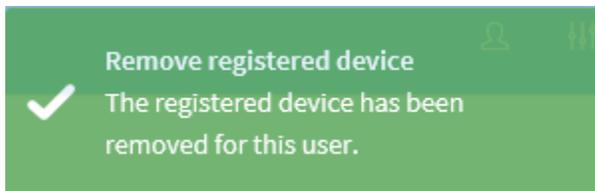

The next time you sign in to HoriZZon you need to use a verification code.

Removing an associated authentication device

You can remove the associated authentication device yourself, or another user with the Administrator role can do it for you. To remove the device, click **Remove** in the **2-Step verification** section of the user manage page, and then click **OK**.

If removal has been successful, you should see the following message:
