

toReal method

Use the **toReal** method to convert a *integer* number value into an *real* value:

```
<result> = <number>.toReal()
```

<number>	A value of type <i>integer</i> or <i>real</i> or an expression that evaluates to a value of these types: the value to convert to real.
<result>	A <i>real</i> : the number as a <i>real</i> . When number was already of type <i>real</i> , the method returns it unchanged.
