

Enforcing 2-step verification for signing in to Horizzon

2-Step verification is a method of authentication that requires the use of more than one verification method and provides extra security for signing in to Horizzon. 2-Step verification can be set up in Horizzon by users with a Horizzon account. It is not possible when using an organizational account to sign in to Horizzon.

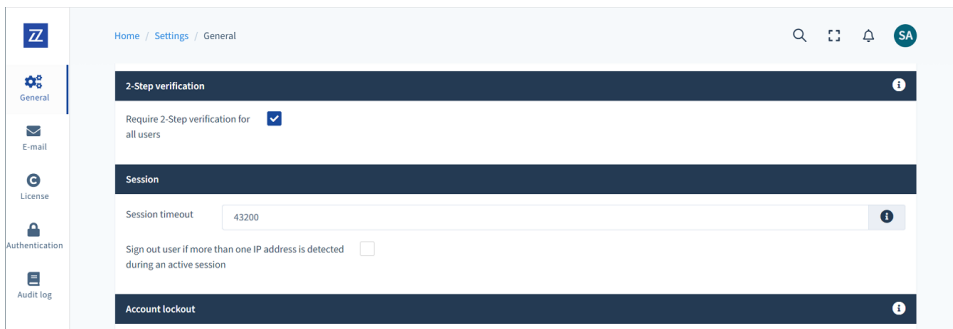

By default, using 2-step verification in Horizzon is optional for users, but it is possible to enforce the use of 2-step verification.

Required roles

System Administrator

Steps:

1. In the sidebar menu, click **Settings > General**.
2. On the general settings page, in **2-Step verification**, select the **Require 2-step verification for all users** option.

3. Click **Apply** to save the changes.

Once mandatory use of 2-step verification has been activated, users who have not yet set up 2-step verification, must register a device for authentication after signing in before they can continue.
